

Welcome to Saned Utilities

Turn Your Data Into Insights

Introduction

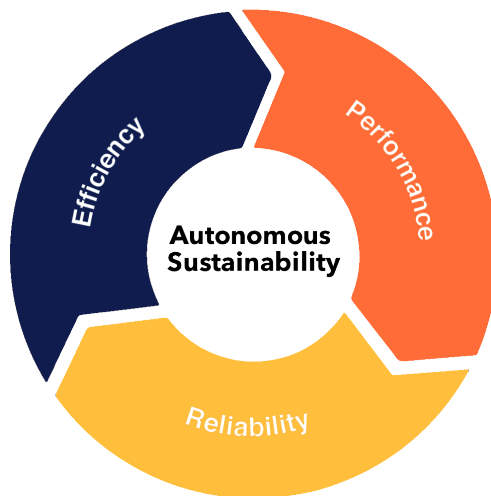

Saned Utilities is an IoT platform that provides smart solutions to companies for energy management, asset performance, and reliability using IoT, cloud computing, ML, and AI technologies.

Saned utilities portfolio of applied AI solutions empowers companies on their Digital transformation journey towards autonomous sustainability.

Our approach to managing assets through the three main pillars:

Manage Asset Efficiency – Record the Asset Health playbook – optimize Asset Service

Optimizing energy usage is done by managing the assets efficiency, performance, and sustainability which will lead to carbon emissions reduction.

Performance

Pinpoint assets that need attention to maintain peak performance. "Digital assists records to manage its reliability" is the slogan that reflects the commitment to providing solutions that help companies manage their assets efficiently and effectively.

Key Benefits:

- Detect anomalies
- Minimize downtime
- Prevent asset degradation

Reliability

Orchestrate end-to-end repair workflows to increase asset reliability. "Breaking the barriers to managing asset servicing" is the slogan that represents the goal of providing efficient and streamlined solutions to help companies manage their assets.

Key Benefits:

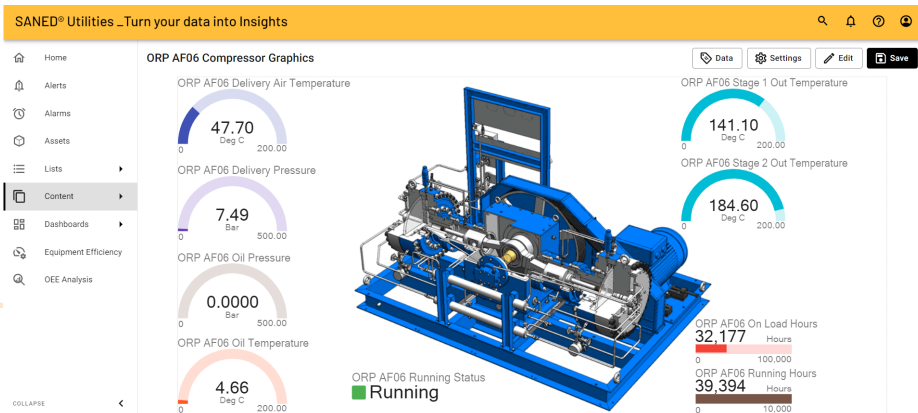

- Codify approval
- Policies and processes
- Measure efficiency and resource utilization
- Extend the life of assets

Efficiency

Optimize utility efficiency without compromising energy and quality. Saned utilities platform provides end-to-end energy, resource, and carbon management solutions, allowing manufacturing sites, and industrial plants to optimize asset performance and efficiency without compromising energy resources and quality.

Key Benefits:

- Reduce energy and carbon
- Minimize energy consumption and cost
- Track ESG performance

What makes our digital solutions unique?

Pre-defined assets libraries

Rapid time to value with adaptive predefined assets libraries.

Out of the box, fully configurable solutions with predefined industry-specific blueprints and data models.

Integrated-platform

Flexibility to deploy on any cloud and IoT platform.

They are designed to be interoperable with existing legacy IT and OT systems.

Automated Analytics

Fully automated, scalable AI model management.

Proprietary Industrial AI Algorithms: automatically generate and train models for specific industries, plants, and assets without the need for additional data scientists.

Orchestration

Open or closed-loop orchestration.

Feedback loops improve the accuracy of AI models, fully automating control throughout

Conclusion

At Saned Utilities, we strive to empower companies on their digital transformation journey by providing intelligent solutions for energy management, asset performance, and reliability. Saned utilities platform helps companies optimize efficiency, minimize energy consumption, and carbon emissions, and increase asset reliability. Saned utilities' end-to-end solutions are designed to meet each customer's unique needs and help them to achieve their sustainability goals. Join us on our mission to enable your facility toward Net Zero.
