

## WPC FRAME DOOR

KOJO Company has launched a new WPC frame door.

KOJO WPC (Wood Plastic Composite) frame door is a new type of door frame made of wood plastic composite material. It has the advantages of natural wood and plastic, and is more durable and environmentally friendly than traditional door frames. KOJO WPC frame door can be used in both residential and commercial buildings.

One of the advantages of WPC frame door is its durability. Unlike traditional wooden door frames, KOJO WPC frame door is resistant to moisture, rot, and insects. This makes it an ideal choice for areas with high humidity or insect infestations.

Another advantage of WPC frame door is its environmental friendliness. Unlike PVC or other plastic materials, WPC is made from natural wood fibers and a recycled plastic binder. This makes it a sustainable building material that reduces waste and carbon emissions.

WPC frame door also has a natural wood look and feel, which makes it a popular choice for those who want the appearance of wood without the maintenance. It can be painted, stained, or left natural to match any decor style.

KOJO WPC frame door is easy to install and maintain. It does not require regular painting or staining, and can be easily cleaned with soap and water. However, it is important to follow the manufacturer's instructions for installation and maintenance to ensure the longevity of the door frame.

Overall, KOJO WPC frame door is a durable, environmentally friendly, and attractive option for any building. Its natural wood appearance and low maintenance make it an excellent choice for those who want a high-quality door frame that will last for years to come.
